

Shubham Semwal

Full-Stack Engineer | React.js | Node.js | Distributed Systems

Haridwar, Uttarakhand, India +91 7906304629 shubhsemwal12@gmail.com

[linkedin](#) [github](#) [Portfolio](#)

Summary

Full-Stack Engineer with 2+ years of experience designing and shipping production-grade web applications. Delivered 3 client projects end-to-end as a freelancer — spanning industrial B2B, document-driven admin platforms, and performance-optimised marketing sites. Independently built personal projects covering horizontally scalable real-time infrastructure (Kafka + Redis + Socket.io) and an AI image-generation SaaS on Kubernetes with full CI/CD automation. Comfortable owning work from architecture and API design through deployment and performance tuning.

Technical Skills

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Redux, Framer Motion

Backend: Node.js, Express.js, Socket.io, REST APIs

Databases: PostgreSQL, MongoDB, Redis (Upstash), Prisma ORM, Firebase

DevOps & Tools: Git, Docker, Kubernetes, GitHub Actions, Vercel, Cloudinary, JWT, Zod, next-auth

AI & Cloud: HuggingFace FLUX, Supabase, Kafka (KafkaJS), Upstash Redis, CI/CD Pipelines

Concepts: Distributed Systems, WebSockets, Component Architecture, Performance Optimization, SEO, Agile

Experience

Freelance Full-Stack Developer

Feb 2024 – Present

Self-Employed

Remote

- **Polytech Materials** (shivapolymer.in) — Built a full industrial B2B website from scratch using Next.js 14 App Router and TypeScript, featuring a dynamic product catalogue with filterable grid, dedicated industry pages, and a client logo marquee — all styled with Tailwind CSS v4 in a custom dark-grey and orange theme.
- **ForestGarden** (forest-garden.in) — Sole developer for a production MERN platform handling hierarchical user-tree management and KYC document workflows; implemented JWT-based auth with granular role-based access control and integrated Cloudinary for secure document storage, eliminating manual admin overhead.
- **FourthMonkey** (fourthmunky.com) — Delivered a mobile-first premium wedding website scoring 95+ on Lighthouse across Chrome, Firefox, and Safari; reduced page load time by 60% using Cloudinary image optimisation and lazy loading, and shipped a zero-backend contact form via EmailJS with 100% message delivery.

Associate Consultant (Frontend Developer)

Jan 2022 – Jan 2024

Cloudsufi

Noida, India

- Contributed to a healthcare web application within an Agile team, delivering iterative UX improvements that measurably increased user engagement across sprint cycles.
- Built and maintained reusable React component libraries, improving UI consistency and reducing new-feature development time across the product.
- Integrated REST APIs for dynamic data rendering and conducted manual testing, catching regressions before production release.
- Automated internal reporting workflows by connecting JIRA and GitHub REST API webhooks to AppSheet, eliminating recurring manual status updates for the team.

Personal Projects

PixelMind — AI Image Generation Studio [\[Code\]](#) [\[Live\]](#) *Next.js 15, TypeScript, Tailwind CSS, HuggingFace FLUX, Prisma 7, Supabase, Upstash Redis, Cloudinary, next-auth, Docker, Kubernetes, GitHub Actions*

- Built a full-stack AI image generation SaaS integrating HuggingFace FLUX.1-schnell, supporting 6 style presets with sub-15s generation time per prompt.
- Implemented Redis-based rate limiting (5 generations/day/user) via Upstash to control third-party API costs — directly addressing a real production Gen AI constraint.
- Containerized with a multi-stage Docker build reducing image size from 1GB to 200MB; deployed on Kubernetes with 2 replicas for zero-downtime rolling updates.
- Built a 3-stage GitHub Actions CI/CD pipeline (lint → Docker build/push → Vercel deploy) triggering automatically on every push to main.

DailyChat — Real-Time Chat Application [\[Code\]](#) [\[Live\]](#) *Next.js, TypeScript, Node.js, Express.js, Socket.io, Redis, Kafka, PostgreSQL, Prisma ORM, Tailwind CSS, NextAuth.js, Zod*

- Designed a horizontally scalable architecture running multiple Node.js instances, using a Redis Streams Adapter with Socket.io to keep messages synchronized across all servers.
- Integrated Kafka (KafkaJS) for async event streaming between services, decoupling message persistence from real-time delivery and improving system resilience under load.
- Enforced runtime type safety via Zod schema validation; deployed frontend on Vercel and backend on Railway with full environment

Education

Master of Computer Applications (MCA)

2018 – 2020

DIT University, Dehradun

Bachelor of Computer Applications (BCA)

2013 – 2016

IMS Unison University, Dehradun
